Suppose you have a 3-simplex. For example, if I have the vertices $$(0,0,0), (0,1,0), (1,0,0)$$ then the set of points that belong to this 3-simplex is $$\left\{(x,y,z) \in \mathbb R^3 \middle| x+y+z=1,\,x,y,z \ge 0\right\}.$$ Is there an easy way to "triangulate" this set of points? For example, is there a simple way to say that the vertices are: $$(0,0,0), (1,0,0), (1,1,0), (1,0,1), (0,1,1), (0,1,0), (0,0,1)$$? A: This can be done by using Gram-Schmidt orthogonalization.
