The Military Secrets Of The FBI The Military Secrets Of The FBI The FBI uses military tactics, including infiltrators and surveillance, to bust drug dealers and terrorists. 08.22.12 1:55 PM ET The FBI is an independent military force.

---

That's right. The FBI isn't a branch of the U.S. military. It's an independent military force. It has its own rank system and its own branch of the armed services, the Bureau of Investigation. Though an agency entirely separate from the Department of Defense, the FBI has many military-like qualities. It has vast assets, including the largest computer network in the world, and it maintains a military-style hierarchy, including field agents and supervisory special agents. As an independent military force, the FBI has an investigative wing made up of the field agents and special agents. These agents (technically called special agents, but the FBI refers to them as field agents) perform undercover

work, interrogations, and criminal investigations that are a bit more high-stress than the typical police job. If you want to know how FBI field agents use military-style tactics, read on. Field agents are trained in military tactics, particularly in close-quarter battle, to see if they can take down a suspect. FBI agents have less equipment than regular police officers, because you can't afford to send a field agent on a SWAT team's equipment when you want to bust a drug dealer. But as soon as you send a field agent on a SWAT team's equipment 77a5ca646e

MM3-WebAssistant - Proxy Offline Browser - Proxy Offline Browser allows you to store webpages in a local offline archive, offering an alternative browsing mode when your Internet connection is unavailable. One of the best proxy browsers we've used over the years. We can store our website and open them on wifi when internet is not working. So much easier than having to wait for wifi signal and open page by browser. Plus, all the website data is cached. I've been using a free browser called LimeWire, it's okay, but it's not the best I've used, and I really wanted a no ads version. This one worked

---

perfectly. What impressed me was that the download speed isn't that bad for a proxy browser. The developers of this also have a good site that can help you with different proxy settings if you're having problems. I can say that I will be getting another for my HTPC. :) Great feature that is easy to use. No ads, no having to look up proxies and the only downside is that the updates are done automatically on one location so if you want to add a site you have to do it through a manual process. I'm a big fan of cache managers, and this is one of the best. It's pretty basic, but it does everything it's supposed to. I really like the simplicity, and it's not a huge application that might cause clutter. Since I have little space on my HTPC,

---

I usually prefer to install software locally instead of running it online. This is a great piece of software to allow me to do that. Cons: If you're using PLEX or any other protocol used by LinuxMCE, the HTTP proxy settings have to be manually changed to work with that protocol. Summary: Not free, but a great tool that works well.
