Prism is a cross-platform, lightweight and extremely powerful and clean text editor. Created on Android, it aims to improve the workflow of any Android user by offering a visual representation of his documents, regardless of what is being saved. A simplistic but efficient interface The application is extremely basic, but also extremely functional. Users will not see any new page windows, as they are entirely contained in the main window. The application has a very simple and uncluttered design, with the basic features and menus grouped into separate tabs. Toolbars are available at the bottom of the main window, which offer several settings and features that help users in the editing and formatting process. When a file is opened, its size, date and time are displayed. Having all the data in a single place makes navigation easier, as the user will have no trouble locating information. All these features are available in Sublime Text and VS Code, two other Android text editors that have won multiple awards for their features. An option for extended features is already included in Prism, and this will be enough for many types of content, but anything more than basic text editing will surely require additional software. The application can be linked to an external editor, however it doesn't offer a full set of features like a web browser Although Prism doesn't offer the most advanced features, it offers a solid editor that works well.
