Programs installed on the computer can cause problems when you uninstall them. This is especially true for applications that store some of their files in subdirectories of C:\Program Files or C:\Program Files (x86). If you attempt to delete all files by hand, the process can be ruined. The next time you run the app, Windows will report errors that can make it almost impossible to open. This is why it's recommended to use a reliable tool for removing programs from the computer. Complete Program Deleter is a program that removes all files for a particular app. When installed, the software creates an archive of the system that allows it to function properly. In the very beginning, a window appears that asks for some details. You need to select which directory you want to scan. Complete Program Deleter is capable of scanning five different locations. These are the C:\Program Files and C:\Program Files (x86) and the folders %APPDATA%, %PROGRAM_FILES%, %ALLUSERSPROFILE% and %LOCALAPPDATA%. For every item detected, it displays its file name, where it was installed and if it's a trial or a program installed. You can close the window by pressing the red cross icon. The list of results can be sorted by name or by type. All the applications will be listed in alphabetical order. If the application was installed or a trial, it can be selected and if there are any trials, you can choose the trial you want to use and then click on Install. If the application is already installed, you will be able to delete the folder or remove it with all its contents.
