Unboxing. Lost in the Movies. HD.Q:  
python list of lists problem everyone.. can  
you help me with this problem? for  
example i have list of lists l:  
[[2,3,4],[1,2],[1]] with this i want to get all  
numbers in list of list but if all elements in  
first list has unique elements i want to get  
whole list. i want to do that with simple  
loop, not with map or filter method for  
example if i have: for i in l: if i[1]!= i[0]  
and i[1]!= i[2] and i[1]!= i[3]: a = i and if  
i[0] = 1, i[1] = 2 and i[2] = 3, and i[3] = 4  
then i want to have this element in list i  
want to have all combinations of unique  
elements from list of lists A: This will work  
for you. l = [[2,3,4],[1,2],[1]] data = [l] for  
index in range(0,len(data),2): for element  
in data[index]: if all(x!=element for x in

---

data[index+1]): print(element) The primary objective of this project is to conduct multi-disciplinary research to design and refine a paradigm for drug use and dependence prevention. The project brings together a multi-disciplinary team of two populations science researchers and one clinical psychologist from multiple units of the University of California-Berkeley. Two hypotheses will be tested: 1) Considerable progress has been made in reducing alcohol problems. Prior research has not addressed crucial questions about the value of the methodologies used, and there
